

FL-03: PROOF STATEMENT

Name: ALI HANI

I build practical Machine Learning and Natural Language Processing (NLP) solutions in Python that solve real-world problems through clean, well-structured code and thoughtful implementation. My portfolio is intended for AI and Machine Learning internship recruiters and hiring managers who want to evaluate my ability to apply technical knowledge beyond academic coursework. After reviewing my projects, I want them to invite me for an interview for an AI or Machine Learning internship.

Why this need to exist

My CV and LinkedIn summarize my education and technical skills, but they cannot fully demonstrate how I solve problems or build complete AI solutions. My portfolio provides that evidence.
